

## REGISTRATION AND LOGIN

The registration page features fields for users to input their name, email address, password, and confirm password details. This setup ensures that users can easily create an account and verify their information, enhancing the registration process's efficiency and security.

On the login page, users are prompted to enter their email and password credentials securely. The streamlined design of this page focuses on simplicity and ease of use, allowing users to access their accounts quickly and securely.

Overall, these completed pages provide a seamless and secure user experience, combining intuitive design with essential security features to facilitate effortless account creation and access.

## OFFER

The primary features of this web page include adding new offers, editing, or deleting existing offers, searching for specific offers, and separate sections to display both active and expired offers.

We can add new offers by entering details such as the title, description, image, expiry date, and category into the designated fields.

For added flexibility, the page includes options to edit or delete existing offers, ensuring dynamic control over the displayed promotions.

The deleting feature enables administrators to remove outdated or irrelevant offers, ensuring the page remains current and valuable to users. Meanwhile, the editing function allows for updates or modifications to existing offers without needing to recreate them entirely.

To streamline the user experience, implemented listing features that allow users to view all active offers.

Additionally, a dedicated section displays expired offers, providing a comprehensive overview of past promotions.

To facilitate quick and efficient searching, a search functionality with a data table has been integrated, enabling users to easily locate specific offers based on keywords or categories. This comprehensive approach ensures that the offer page is user-friendly, efficient, and capable of managing promotions seamlessly.

## FEATURES

The feature page is a comprehensive platform designed to provide users with versatile tools for managing content effectively.

Its primary functionalities include the ability to add new features by inputting essential details such as title, description fields. This feature ensures that all content is accurately represented and easily accessible.

Additionally, the page offers robust editing and deleting options, allowing for dynamic control over the displayed content. The editing function enables users to make updates or modifications to existing features without starting from scratch, while the delete feature allows for the removal of outdated or irrelevant content, keeping the page current and valuable.

To enhance user navigation and accessibility, the page incorporates a powerful search functionality with a data table, enabling users to quickly and efficiently locate specific features based on keywords or categories.

Moreover, the page's listing features provide users with a comprehensive view of all active features, ensuring a streamlined and user-friendly experience. Together, these functionalities make the feature page a versatile and efficient tool for managing and organizing content seamlessly.

## NEWSLETTER

Monthly newsletter is a valuable resource designed to keep our subscribers informed and engaged with the latest updates, news, and insights from our organization.

Each edition is carefully crafted to provide relevant and timely information, ensuring that the audience stays connected and up-to-date with what is happening in community.

With an easy-to-navigate layout and visually appealing design, monthly newsletter offers a convenient and accessible way for subscribers to stay informed, making it an essential communication tool for organization.

### CODE - NEWSLETTER
